AUTHOR INDEX 597

Subject Index for Volume 6 will appear in the December issue as part of a cumulative index for the year 1973

Information for Authors

Journal of Solid State Chemistry publishes manuscripts on chemical, structural, thermodynamic, electronic, magnetic and l properties and processes in solids. Typical studies encompass crystal chemistry, phase equilibria and transformations, -disorder phenomena, diffusion, high-temperature and high-pressure processes, crystal growth mechanisms, epitaxy, ng in solids, reactions at surfaces, statistical mechanics of defect interactions. Both theoretical and experimental papers elcome. On occasion a critical review is sought in selected rapidly developing fields.

glish, French, and German are the official languages of the Journal. Papers in Russian are acceptable, but they will be ated into English before publication.

nuscripts may be submitted to any one of the three editors (R. E. Hughes, Department of Chemistry, Cornell University, a, NY 14850; M. J. Sienko, Department of Chemistry, Cornell University, Ithaca, NY 14850; A. Wold, Division of eering, Brown University, Providence, RI 02912) or through any member of the Editorial Advisory Board.

nuscripts should be submitted in triplicate—double-spaced on one side of 21.5 × 28 cm paper. Headings of major sections d be typed in capital letters and centered on the page.

h page of the manuscript should be numbered. The first page should contain the article title, author's name, and tion. At the bottom of this page should appear any footnotes to the title (indicated by superscript *, †). The second page d contain an abstract (50–150 words) which should be suitable for use in *Chemical Abstracts*.

e American Chemical Society's *Handbook for Authors* should be followed regarding matters of style and abbreviations of The *Style Manual* of the American Institute of Physics is also an acceptable guide.

bles. Tables should be numbered with Roman numerals in a sequence corresponding to the order of citation in the text. s larger than two manuscript pages will be reproduced by photoengraving; therefore, all extended tables should be red carefully in clear sharp type. Errors in such tables cannot be corrected in proof. Whenever appropriate, the tables d be designed to fit the Journal page after photoreduction. Glossy prints of these extended tables are desirable. Footnotes bles are to be placed directly below the table and should be indicated by superscript, lower-case italic letters ($^{a, b, c}$).

ecial Tables. In lieu of publication, it may be necessary to deposit unusually long tables with the National Auxiliary cations Service (NAPS). In particular, structure factor tables must be deposited if, in a clear, proportioned, photoreduced at, they would occupy more than one Journal page (this corresponds to a limit of about 1000 F_o and F_c). In any case, copies of all tables must be submitted with the manuscript.

r material to be deposited, a deposit fee of $12.50 for up to 60 pages of standard-size or 30 pages of oversize deposited rial is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany deposited material will be ied to the authors by the editors at the time a paper is accepted for publication.

e following footnote (wherein missing numbers are to be inserted by the author in page proof) should be used to nce deposited material:

"A table of ..... has been deposited as Document No. NAPS-..... with the ASIS tional Auxiliary Publications Service, c/o Microfiche Publications, Div. of Microfiche Systems Corporation, 305 East Street, New York, N. Y. 10017. A copy may be secured by citing the document number and by remitting $..... for otocopies or $..... for microfiche. Advance payment is required. Make check or money order payable to IS-NAPS."

gures. Authors should send glossy prints or original black ink drawings, no larger than 21.5 × 28 cm. It is important that ings be lettered with a lettering set and planned to fit the proportion of the printed page (19 × 26.5 cm). Background grids ld not be included. The caption of each axis should be lettered parallel to its axis. Lettering on the original should be enough to be legible after a reduction of 50%. For half-tone reproductions, glossy, high-contrast, black and white prints ld be submitted. Each figure should be identified in a margin with the author's name and figure number. Figures are to be in text by consecutive Arabic numerals. Figure captions should be typed as a list on a separate page.

uations. Equations should be typewritten or clearly handwritten, with an Arabic number if necessary for reference placed rentheses to the right of the equation. Reference to equations should use the form "Eq. (3)."

otnotes. Footnotes to the text should be indicated by consecutive superscript numbers and listed on a separate page at the f the article.

ferences. References should be cited in text by consecutive underlined numbers in parentheses. The references must appear separate sheet, listed in numerical order—i.e., in accordance with order of citation in text. After the reference number, the or's initials, last name, journal name, volume, initial page number, and year (in parentheses) should be listed in that order. reviations for journal names should follow the style of *Chemical Abstracts' Service Source Index*. For book references, give uthor's name, name of book (in quotes), editor's name (if any), edition (if other than the first), chapter, or page number, isher's name, place, and year of publication.

oofs. Unfolioed page proofs will be sent to the author with reprint order forms. Fifty reprints of each article are granted of charge, and additional copies may be purchased. There is no page charge.

Advances in
HIGH TEMPERATURE CHEMISTRY

Edited by LEROY EYRING

Department of Chemistry
Arizona State University
Tempe, Arizona

Volume 3

CONTENTS:

R. J. THORN, Some Theoretical Significances of High Temperature Chemistry J. M. COWLEY, Short-Range Ordering in Crystals. GUY R. B. ELLIOTT, DONALD R. CONANT, BARTON L. HOUSEMAN, HAROLD S. SWOFFORD, Jr., PRESS L. ROBINSON, and CHARLES E. HOLLEY, Interpreting Liquid Alloy Activity Measurements: A Changing Scientific Paradigm. J. BERKOWITZ, Photoionization Mass Spectrometry and Photoelectron Spectroscopy of High Temperature Vapors. FRANK J. LOVAS and DAVID R. LIDE, Jr., Microwave Spectroscopy of High Temperature Gases. LINSEN HSIA NGAI and FRED E. STAFFORD, Gaseous Oxohalides, Hydroxides, and Complex Oxides of Group III and Transition Elements.

1971, 302 pp., $17.50

Volume 4

CONTENTS:

DOLPHUS E. MILLIGAN and MARILYN E. JACOX, Infrared and Ultraviolet Spectroscopic Studies of a Number of Small Free Radicals and Molecular Ions in a Matrix Environment. ROBERT F. PETERSON, Jr., and RICHARD WOLFGANG, The Elementary Reactions of Atomic Carbon. WAYNE L. WORRELL, Dissociation of Gaseous Molecules on Solids at High Temperature. GERALD L. DEPOORTER and T. C. WALLACE, Diffusion in Binary Carbides. G. A. SOMORJAI and F. J. SZALKOWSKI, Auger Spectroscopy on Surfaces. R. F. BARROW and C. COUSINS, Spectroscopic Properties of the Gaseous Diatomic Sulphides. LLOYD S. NELSON, Techniques for Studying Liquids and Solids at Extreme Temperatures. C. C. HERRICK, Automatic Data Acquisition and Its Treatment. ALLEN L. BOWMAN and GEORGE P. ARNOLD, High Temperature Neutron Diffraction Studies. **1972, 296 pp., $17.50**
